**PARKER SWEEPER COMPANY**

**BOX 720**

**SPRINGFIELD, OHIO 4**

1M-PV-16802-E & EX

# ASSEMBLY INSTRUCTIONS

PV-16802-E & EX

1. Your sweeper has been shipped in two cartons, one containing the sweeper unit, with the rolled up dust bag and spin-pak, the other containing the handle. Unroll the dust bag and you will find the hub caps, caster and bag of hardware. Check the hardware with the following list:

PV-16802-E&EX

- 61-13-A 4 Handle Inserts, Ref. No. 26, Fig. 5
- 65-416-20, 2 Bolts - Hex Hd.  
Ref. No. 3, Fig. 5 ¼-20 x 1¼
- 364-416, 2 Nuts - Hex Lock  
Ref. No. 5, Fig. 5 ¼-20 Thin Type
- 65-516-20, 4 Bolts - Hex Hd.  
Ref. No. 14, Fig. 5 5/16-18 x 1¼
- 365-516, 4 Nuts - Hex Lock  
Ref. No. 22, Fig. 5 5/16-18
- 69-416-20, 2 Bolts - Contour Hd.  
Ref. No. 7, Fig. 5 ¼-20 x 1¼
- 936-416, 2 Washer - Inter. Tooth Lock  
Ref. No. 13, Fig. 5 ¼ I.D.
- 335-416, 2 Nuts - Regular Hex  
Ref. No. 6, Fig. 5 ¼-20
- 66-378-A, 2 "U" Bolts ¼-20 Thd.  
Ref. No. 10, Fig. 3
- 63-23-A, 1 Hanger Ref. No. 7, Fig. 3
- 364-416, 5 Nuts - Hex Lock  
Ref. No. 8, Fig. 3 ¼-20 Thin Type
- 65-416-16, 1 Bolt - Hex Hd.  
Ref. No. 6, Fig. 3 ¼-20 x 1

PV-16820-E only

2. Attach the caster, Ref. No. 20 in Fig. 6 to the bracket Ref. No. 18. Run the jam nut, Ref. No. 19 down on the caster stem. Then screw the caster stem into the bracket Ref. No. 18.

3. Lay out the two handles, Ref. No. 2, Fig. 5 and the two handle trusses Ref. No. 12, Fig. 5. Make sure the steel inserts Ref. No. 26, Fig. 5 is placed in the lower end of all four tubes.

4. Note that there are two sets of holes in the handle truss. Attach top cross brace as shown in Fig. 1 to the handle. Place the bolt Ref. No. 3, Fig. 5 through the top hole in handle truss for maximum handle height. (If lower position is more desirable use the second hole from the end of truss. Assemble both sets of handle and truss in the same hole location on each side. **DO NOT TIGHTEN BOLTS.**

5. Assemble the lower cross brace Ref. No. 11 on the bottom of the two handles as shown in Fig. 5 using Ref. No. 7-13 and 6 contour bolts internal tooth washers and regular hex nuts **DO NOT TIGHTEN BOLTS.**

6. Assemble the two trusses to bottom holes of the right and left handle and axle brackets Ref. No. 23 & 15 with bolts and nuts Ref. No. 4 and 22, Fig. 5 making sure a steel insert Ref. No. 26, Fig. 5 is in the end of each truss as shown at Point "C" Fig. 2. **DO NOT TIGHTEN.**

7. Assemble the two handles to top holes of the right and left handle and axle brackets Ref. No. 23 & 15 with bolts and nuts Ref. No. 14 and 22, Fig. 5 making sure steel inserts Ref. 26, Fig. 5 is in the end of each handle as shown at point "D", Fig. 2. **DO NOT TIGHTEN.**

Figure 1

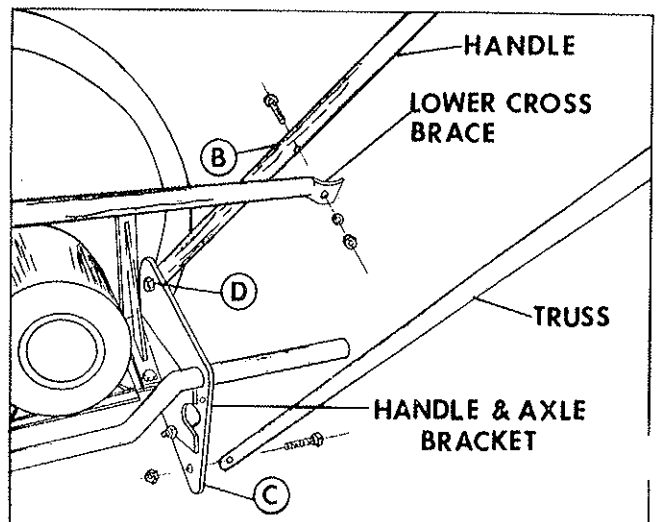

Figure 2

# ASSEMBLY INSTRUCTIONS

PV-16802-E & EX (cont'd)

7. Now tighten all bolts and nuts on the handle assembly per Figs. 1, 2 and 5. Do not tighten bolts and nuts to the extent of collapsing the tubes.
8. Ref. Fig. 3 (PV-16802-E only) Next attach the switch and bracket assembly Ref. Nos. 12 and 19 to the handle Ref. No. 3 up close to the cross brace Ref. No. 1, with the two "U" bolts and nuts Ref. Nos. 10 and 8.
9. Now slip the hanger Ref. No. 7 over the cable Ref. No. 5 then over the handle Ref. No. 3 and fasten with bolt and nut Ref. No. 6 and 8, locate Ref. No. 7 hanger where most convenient on handle Ref. No. 3.
10. Ref. Fig. 6 - Assemble the Spin-Pak Ref. No. 26 to the Blower Housing Ref. No. 5 by slipping the ring over the Housing neck in the position shown. Line up the holes and insert (2) 1/4-20 x 5/8 bolts Ref. No. 15 and (2) 1/4-20 x 3/4 bolts Ref. No. 25 assemble washers and nuts Ref. No.'s 3 and 24 to bolts. "DO NOT TIGHTEN". Next "CENTER UP" Spin-Pak and tighten top bolt. Next press ring around the Housing on the sides and tighten the side bolts, finally tighten the bottom bolt.
11. Ref. Fig. 5 - Attach the dust bag to the sweeper by placing the loops over the handles and attaching the hooks Ref. No. 10 to the bag straps, then hooking them over the lower cross brace Ref. No. 11. Now slip the neck of the dust bag over the deflector assembly Ref. No. 26 in Fig. 6 until you can pull the tie strap tight around the housing neck just behind the bead on the deflector ring.
12. Ref. Fig. 6 - The Intake Housing Ref. No. 17 should be attached to the front of the Blower Housing by inserting the hinge boss behind the hinge rod on the Front Cover Ref. No. 27. Next swing the Intake Housing Ref. No. 17 until the slot fits over the adjusting screw and can be locked in place by tightening knob Ref. No. 13.

## OPTIONAL ACCESSORIES

- BAG PLATFORM (Stock No. 66-207-C). Easily installed platform supports bag when filled with heavy load. (Not available for Battery Model.)
- MAGNETIC ROD KIT (Stock No. 64-59-D). Assembles to intake housing. Attracts metal objects. Adjustable. (Available for 30" intake housing only.)
- RUBBER ROLLER KIT (Stock No. MA-209-D). Extra-wide roller recommended primarily for turf sweeping. Adjusts for hard surfaces.
- SCRAPER BRUSH KIT (Stock No. 64-58-D). Installs inside rear of intake housing. Loosens debris which adheres to surface. (Available for 30" intake housing only.)

### ALWAYS GIVE THE FOLLOWING INFORMATION WHEN ORDERING REPAIR PARTS:

**IMPORTANT**

1. PART NUMBER (Not Ref. No.)
2. QUANTITY NEEDED
3. DESCRIPTION OF PART
4. MODEL No. PV-16802-E OR EX

If unable to obtain parts locally, write down above information and send to:  
PARKER SWEEPER CO., BOX 720, SPRINGFIELD, OHIO 45501  
Your unit is right hand (R.H.) or left hand (L.H.) as you stand behind it.

## OPERATING INSTRUCTIONS

PV-16802-E & EX

1. **KEEP FILTER BAG CLEAN.** The efficiency of this unit partly depends on the breathing capabilities of the dust bag. On extremely dusty jobs, empty bag often. Never allow debris to remain in bag after use. When cleaning shake bag vigorously to remove the dust from the pores of the fabric. It is also suggested that after the bag is emptied, place it on the machine and with the zipper open, run motor to clean the pores.
2. Make sure bag is in place when starting and stopping motor.
3. Your Vac-35 is equipped with a front adjustable caster which will provide any height adjustment of intake housing that may be desired, within a practical range. Adjustment for the Intake Housing height is made by screwing the caster Ref. No. 20 in or out of the Bracket Ref. No. 18 then locking with lock nut Ref. No. 19, Fig. 6.
4. Your Vac-35 will handle most common kinds of debris found around industrial plants, commercial buildings, homes and farms. Acid contaminated materials, magnesium, dust and other **DANGEROUS** debris that is considered hazardous should not be handled with Vac-35 unless approved by a regulating authority considered to be an expert in the handling of such hazardous materials.
5. **DO NOT WORK ON VAC-35** repairs or changing of attachments with motor running, detach cord.
6. Never walk away from the machine with the motor running.
7. **LUBRICATION.** Lubricate the bearings and wheel axle on the caster once a week if used daily.

## MOTOR MOUNTING ASSEMBLY

PV-16802-E

Ref. Fig. 4 - The Electric Parker Vac-35 is equipped with a 2 HP (OPEN TYPE) motor wired for 220/440 Volts, 50/60 Cycle, 3 Phase 4 Wire System. One lead is grounded for safety purposes. The motor operates at a constant speed of 3475 RPM and is not variable. The unit is to be used for non-abrasive dust and light litter of a soft or non-rigid type, in areas where gasoline-powered or Liquified Petroleum powered models are prohibited or undesirable because of fumes, etc., or where the noise level of internal combustion engines would be objectionable. Due to the very fast fan speed, abrasive dusts, sand, gravel, small hard objects such as metal parts, chips or wood blocks must be avoided or fan and blower housing will suffer severe damage. Typical applications would be food and drug processing plants.

**CAUTION:** All electrical cord and outlets should meet local and national electrical codes.

For extension cord up to 50 Ft. in length use No. 16 wire.

For extension cord up to 100 Ft. in length use No. 12 wire.

**IMPORTANT** - It is important that the direction of the Vac-35 Impeller rotation be checked on this machine. Looking directly at the impeller from the front of the machine, it should turn counter clockwise.

This unit is powered with a 220/440 volt, 3 phase (OPEN TYPE) motor and its direction of rotation is determined by the sequence of the phase connections. This unit leaves the factory properly wired for 220 current and a standard sequence. If your power connections are not standard, it will be necessary to inter-change any TWO of the three lead connections 1,2 and 3 on the motor to obtain the corrective direction of rotation. Your power company can assist you in the determination of the phase sequence.

# MOTOR MOUNTING ASSEMBLY

PV-16802-EX

Ref. Fig. 4A - This electric Parker Vac-35 is equipped with a 2 HP underwriter's laboratory approved EXPLOSION PROOF motor 220-440 VOLT 3 PHASE 50/60 CYCLE and switch for class 1 group D and class 2 groups F and G classifications. These classifications cover the applications listed as follows:

### GASEOUS LOCATIONS

Gaseous locations such as gasoline refineries, paint and varnish plants, dry cleaning plants, or wherever the gas encountered is not more hazardous than high-test gasoline vapor.

### EXPLOSIVE DUST

Areas containing explosive dust from coal, coke, carbon black or other materials.

### EXPLOSIVE GRAIN DUST

Applications in grain elevators, feed mills, flour mills or other locations where the atmosphere contains explosive grain dust.

The motor is wired for 220-440 Volts 50/60 cycle 3 phase system with wiring into the on/off switch which is mounted on the unit. All electrical cord and outlets used in opera-

ting this Vac-35 should meet local and national electrical codes. For operating in explosive environment.

**IMPORTANT** - It is important that the direction of the Vac-35 Impeller rotation be checked on this machine. Looking directly at the impeller from the front of the machine, it should turn counter clockwise.

This unit is powered with a 220/440 volt, 3 phase motor and its direction of rotation is determined by the sequence of the phase connections. This unit leaves the factory properly wired for a 220 current and a standard sequence. If your power connections are not standard, it will be necessary to interchange any TWO of the three lead connections 1, 2 and 3 on the motor to obtain the corrective direction of rotation. Your power company can assist you in the determination of the phase sequence.

**CAUTION:** All electrical cord and outlets should meet local and national electrical codes. For extension cord up to 50 Ft. in length use No. 16 wire. For extension cord up to 100 Ft. in length use No. 12 wire.
